Based in Qatar & Istanbul, Turkey • Open to relocating to the Netherlands, Switzerland, or the United States

SUMMARY

AI Engineer with hands-on experience across LLMs, agent systems, computer vision, and classical ML. Shipped a production AI pipeline at a Zurich-based recruitment-tech startup, deployed an LLM-powered agent end-to-end on WhatsApp, and built ML platforms from feature engineering to Dockerized APIs and live dashboards. Based between Qatar and Istanbul, and open to relocating to the Netherlands, Switzerland, or the United States for the right opportunity; aiming to grow my career in AI Engineering by contributing to production-level AI products.

PROFESSIONAL EXPERIENCE

Artificial Intelligence Engineer (Internship), ROVR, Zurich, Switzerland **Jul 2025 – Jan 2026**

- Designed and shipped an end-to-end AI pipeline for semi-structured recruitment data, combining rule-based parsing with LLM-based structured extraction across diverse real-world CV layouts; processed batches of hundreds of CVs per run.
- Built an LLM-as-a-Judge evaluation layer with routing logic and output constraints that reduced hallucinations and made batch outputs deterministic enough for production.
- Replaced hard scoring thresholds with soft, normalized transitions; verified via Spearman rank-correlation analysis that ranking stability improved across role profiles under input perturbation.
- Ran a fairness audit of scoring outputs across candidate groups and shipped length-normalized feature caps that reduced group-level score disparities without erasing legitimate ranking differences.
- Refactored the codebase into typed, documented modules with explicit failure-mode handling for team handoff.

SELECTED PROJECTS

Style-Adaptive Conversational Agent for WhatsApp (Thesis) **2025 – 2026**

github.com/abdelqasim/whatsapp-style-agent · n8n, OpenAI API, WhatsApp Business API, Python, RAG, Qdrant, Haystack 2.x, Docker

- Built and deployed an LLM-powered WhatsApp agent using n8n for webhook handling, session management, and multi-step workflow orchestration, with style-adaptive response generation that reads each user's tone and formality.
- Designed multi-turn memory, context windowing, and guardrail layers to keep conversations coherent and on-topic over long sessions.

HVAC Fault Detection & Diagnostics Platform **2026**

github.com/abdelqasim/HVACC · LightGBM, FastAPI, Streamlit, MLflow, Docker, Python, Scikit-learn, Pandas

- Built sliding-window feature engineering across 6 RTU sensor signals (LBNL dataset) feeding a LightGBM classifier distinguishing 6 fault classes (90.9% accuracy, 0.909 macro F1), tracked via MLflow with a model registry.
- Shipped a FastAPI microservice (/predict_window, /batch_predict, /explain) for real-time and batch inference; containerized the full stack with Docker Compose.

LSTM–XGBoost BTC Trading Signal Generation **2024 – 2025**

github.com/abdelqasim/lstm-xgb-trading-signals · LSTM, XGBoost, Streamlit, Plotly, ccxt (Binance USDM API), TensorFlow/Keras

- Built a hybrid LSTM+XGBoost pipeline for BTC/USDT signal generation, combining learned temporal features with RSI/MACD/Bollinger/EMA/ATR indicators; reached ~70–75% signal accuracy in backtesting.
- Deployed a live Streamlit dashboard with real-time Binance data streaming and a risk-management engine for leverage and P&L estimation.

EDUCATION

B.Sc. Artificial Intelligence Engineering, Bahçeşehir University **2022 – 2026**

Focus: Machine Learning, Deep Learning, NLP, Computer Vision, Embedded Systems, MLOps, Data Science.

TECHNICAL SKILLS

Languages: Python, SQL, C++ (Embedded Systems)

ML & AI: Supervised/Unsupervised Learning, Deep Learning, NLP, Computer Vision, Generative AI, LLM Fine-Tuning, Prompt Engineering, RAG, Embedding-Based Retrieval, LLM-as-a-Judge

Frameworks: PyTorch, TensorFlow, Keras, Hugging Face Transformers, Scikit-learn, OpenCV, Streamlit, Pandas, NumPy

MLOps & Deployment: Docker, Apache Airflow, Azure ML, Google Cloud Platform, Model Deployment Pipelines, Microservices

Agents & Automation: n8n, LangChain, OpenAI API, Qdrant, Haystack 2.x, Webhook Integration, Multi-Agent Orchestration

LANGUAGES

Arabic (Native) • English (Fluent) • Turkish (Conversational)

CERTIFICATES

Explainable AI (Duke University, 2026), Generative AI (Starweaver, 2026), Deep Learning (IBM, 2025), MLOps (Duke University / Google Cloud / DeepLearning.AI, 2025), Cloud Computing (Microsoft Azure / Google Cloud / Duke University, 2024), and Machine Learning & Data Science (IBM, 2024). 35+ certifications total; full list on LinkedIn.
